

SVM Stainless Steel Soffit Vent Mesh

Data sheet
Issue Date:
October 2026

Stainless Steel Soffit Vent Mesh is for use in new build properties. It is used over vents in soffits to allow air flow to prevent condensation but prevents access to birds and insects. It is lightweight and supplied in a dispenser. All expanded metal products are manufactured from a single piece of raw material and are created as a continuous mesh with no joints or loose strands. The finished product has a greater strength to weight ratio than the un-expanded parent material. Expanded metal by its very nature is a green product with almost no wastage arising from the manufacturing process. Additional specification variations are available, please contact us for more information.

Features

- LW Pitch: 3.00mm
- SW Pitch: 1.81mm
- Weight: 0.30 kg / m2
- Strand Width: 0.25mm
- Thickness: 0.15mm
- Open Area: 72%
- Material: Stainless Steel Grade 304 to BS EN 1.4301
- Coil Size: 75mm x 30 Metres
- Reaction to fire: Class A1

Code	Size	Per Box	Weight
TSVM3075	75mm x 30m	1 Roll	1kgs

Goods to be stored and transported laying down and in dry conditions.
Please dispose or recycle in accordance with waste management regulations.

COSHH & Health & Safety.

Contains no substances hazardous to health. The comparative rough surface finish and sharp edges of expanded metal requires care when handling manually, to avoid risk of cuts and abrasions gloves should be worn.
