

ALTSPACE Base Track Spacer Piece

Data sheet

Issue Date:
June 2026

PVC Spacer

PVC spacers provide a simple but essential function within external rendering and ETICS systems, helping maintain consistent stand-off distances between the base profile and the substrate. By ensuring uniform spacing, they support accurate alignment, promote straight runs, and help manage minor surface irregularities. Durable, lightweight, and easy to handle, PVC spacers contribute to reliable installation quality and long-term system performance, regardless of the profile type.

ALTSPACE Base Track Spacer Piece

The Locusrite PVC spacer is designed for levelling uneven substrates when anchoring base profiles with hammer-in anchors in ETICS systems, helping ensure a straight, stable installation. Its durable PVC construction prevents base profile deformation, while the distinctive “snowman” shape allows quick, secure clamping onto any dowel diameter. Colour-coded thicknesses make selection easy on site, and integrated reinforcing ribs provide added rigidity and reliable support during fixing.

Material: PVC

Code	Size	Per Box	Weight
ALTSPACE03	3mm	50	0.5kgs
ALTSPACE05	5mm	50	0.6kgs
ALTSPACE10	10mm	50	0.7kgs
ALTSPACE15	15mm	50	0.8kgs

Packed in cardboard dispenser boxes. Store in a dry roofed place. Transport in the horizontal position to prevent base profile or other object damage. Please dispose or recycle in accordance with waste management regulations.

COSHH & Health & Safety.

Contains no substances hazardous to health. The comparative rough surface finish and sharp edges requires care when handling manually, to avoid risk of cuts and abrasions gloves should be worn.
